Toronto Functional Medicine Centre Explores NAD Therapy Considerations for Adults in Their 40s

June 26, 2026

TORONTO, ON - June 26, 2026 -

Toronto Functional Medicine Centre has published educational content examining whether adults in their 40s should consider NAD supplementation as part of their approach to healthy aging. The Centre's recent publication addresses growing interest in NAD (Nicotinamide adenine dinucleotide) therapy and its potential role in supporting cellular health as people age.

NAD is a coenzyme found in every cell that plays key roles in DNA repair, cell stress responses, brain and cardiovascular health, and mitochondrial functioning. Research indicates that NAD levels naturally decline with age, potentially contributing to symptoms such as excessive fatigue, skin changes, and chronic inflammation. This decline has prompted increased attention to NAD supplementation methods, including intravenous therapy, sublingual, and oral supplements.

The Centre's educational material specifically addresses individuals in their 40s who may be experiencing early signs of aging. At this life stage, many adults begin noticing changes in energy levels, recovery time,

and overall vitality. The publication examines whether NAD supplementation during this period might support energy production and healthy aging processes.

Toronto NAD IV therapy has gained attention in functional medicine circles as one method of NAD supplementation. The intravenous delivery method allows for direct absorption into the bloodstream, bypassing the digestive system. The Centre emphasizes that while NAD supplements in various forms may potentially offer support for cellular health, individual consultation with healthcare providers remains essential before beginning any supplementation regimen.

Functional medicine practitioners approach NAD therapy as part of a wellness strategy rather than an isolated intervention. This perspective considers factors such as gut health, hormonal balance, and overall cellular function when evaluating whether NAD supplementation might be appropriate for an individual.

The educational content highlights important considerations regarding NAD supplementation, including potential interactions with other medications and existing health conditions. The Centre notes that NAD IV Therapy in Toronto with Glutathione and Red-Light Therapy represents one of several approaches being explored in functional medicine settings, though individual suitability varies based on personal health factors.

The publication also addresses common misconceptions about NAD therapy, clarifying that while research suggests potential benefits, results vary among individuals. The Centre's approach involves thorough assessment to determine whether NAD therapy aligns with a person's health goals and current wellness status.

Toronto Functional Medicine Centre offers various forms of integrative healthcare, including acupuncture, naturopathic medicine, IV therapy, and bio-identical hormone treatments. The Centre's approach to wellness focuses on three primary pillars: gut health, brain health, and hormonal balance. Their practitioners work to identify root causes of health concerns while supporting the body's natural healing processes.

Located in Yorkville, Toronto, the Centre provides educational resources on functional medicine approaches to various health concerns. Their services include lab testing, detoxification support, and nutritional therapies designed to optimize cellular health and immune function. The Centre's practitioners utilize an integrative approach that combines traditional and contemporary therapeutic methods to support individual wellness goals.
